

Plinko

The Game

In Plinko, a ball is placed in one of the slots at the top of the board, from where it will bounce off of the pegs randomly, eventually making its way to one of the buckets on the bottom of the board. Players place bets with the dealer on one of the slots at the top of the board. Once a bet has been made, the dealer will drop a Plinko ball into the appropriate slot.

Betting

The slots at the top of the Plinko board have different odds of hitting the payouts. For this reason, each slot is labeled with a different bet value. You select a specific slot by placing a bet of the appropriate value in the correct circle on the betting mat. Only one bet may be made at a time.

Payouts

The buckets along the bottom of the Plinko board are labeled with the amount that will be paid out if a Plinko ball lands in that bucket.

Equipment Interactions

Players are not allowed to directly interact with the Plinko board. Players may not touch/bump/nudge/tilt or in any other way interact with the Plinko board at any time. Only the dealer is permitted to touch the Plinko board. Players also may not touch the dealer.
